

A Single compressed generation

Qwen2.5-7B-Instruct, random press, ratio 0.75

GSM8K problem

ground truth: 175 kg

Goldy bought 20 sacks of rice and gave 3 sacks to her cousin and 5 sacks to her brother. If each sack has 25 kg, how many kg did she give to her cousin and brother?

Total sacks given = 3 + 5 = 8. Total weight = 8 x 25 = 200 kg.
Therefore the total weight is boxed 200 kg.

HERALD low

However, the question asks for the 3 sacks to her cousin and the 5 sacks to her brother. The correct answer should be boxed 75 kg and 125 kg.

HERALD rising

detected onset: token 384

But since the question asks..., the final answer is boxed 75 kg and 125 kg.
So, the final answer is boxed 75 kg and 125 kg.
Therefore, the final answer is boxed 75 kg and 125 kg.
So, the final answer is boxed 75 kg and 125 kg.

looping

generation reaches the token budget without EOS

B Warning signal before visible failure

Same sequence, aligned so failure onset is token 0
